Synopsis

The business-to-consumer aspect of electronic commerce (e-commerce) is the most visible business use of the World Wide Web. The primary goal of fanOfan site is to sell many kinds of fans online.

This project deals with making an e-commerce website for kind of fans (an online store). It provides the user with a catalog of different kinds (for homes, hotels) and any places available for purchase in the store.

In order to establish this website, a number of Technologies must be studied and understood. These include implementation technologies such as ASP.NET, programming language (such as HTML, CSS, JQuery and JAVASCRIPT).

This is a project with the objective to establish fanOfan website where a consumer is provided with a shopping cart application and also to know about the technologies used to develop such an application.

This document will discuss the techniques that used to do this website and everything about it.

ACKNOWLEDGMENTS

In completing this graduate project, I have been fortunate to have help, support and encouragement from many people. I would like to acknowledge them for their cooperation.

First, I would like to thank Dr. Mohammed Alharazi, my project advisor, for guiding me through each and every step of the process with knowledge and support. Thank you for your advice, guidance and assistance.

I would also like to thank Dr. Fawaz, my project committee members, who showed immense patience and understanding throughout the project and provided suggestions.

Finally, I would like to dedicate this project to my parents, and for their love, encouragement and help throughout the project.

Introduction

E-commerce is fast gaining ground as an accepted and used business paradigm. More and more business houses are implementing web sites providing functionality for performing commercial transactions over the web. It is reasonable to say that the process of shopping on the web is becoming commonplace.

The objective of this project is to make an e-commerce store for many Kind of fans where the products

(for homes, hotels) and any places. These products can be bought from the comfort of home through the Internet.

fanOfan website is an online virtual store on the Internet where customers can browse the catalog and select products of interest. The selected items are collected in a shopping cart. At checkout time, the items in the shopping cart will be presented as an order. At that time, more information will be needed to complete the transaction. The customer will be asked to fill billing address, a shipping address, a shipping option, and payment information such as credit card number. An e-mail notification is sent to the customer as soon as the order is placed.

In order to design a website, the **process model** must be designed. process model deals with how the data is processed. The process model is used to design the queries that will access and perform operations on this website.

Process Model

A Process Model tells us about how the data is processed and how the data flows gather the required information. This model consists of the Functional Decomposition Diagram and Data Flow Diagram.

Functional Decomposition Diagram

A decomposition diagram shows a top-down functional decomposition of a system and exposes the system's structure. The objective of the Functional Decomposition is to break down a system step by step, beginning with the main function of a system and continuing with the interim levels down to the level of elementary functions. The diagram is the starting point for more detailed process diagrams, such as data flow diagrams (DFD). Figure 1 shows the Functional Decomposition Diagram for this project.

Figure 1 Functional Decomposition Diagram

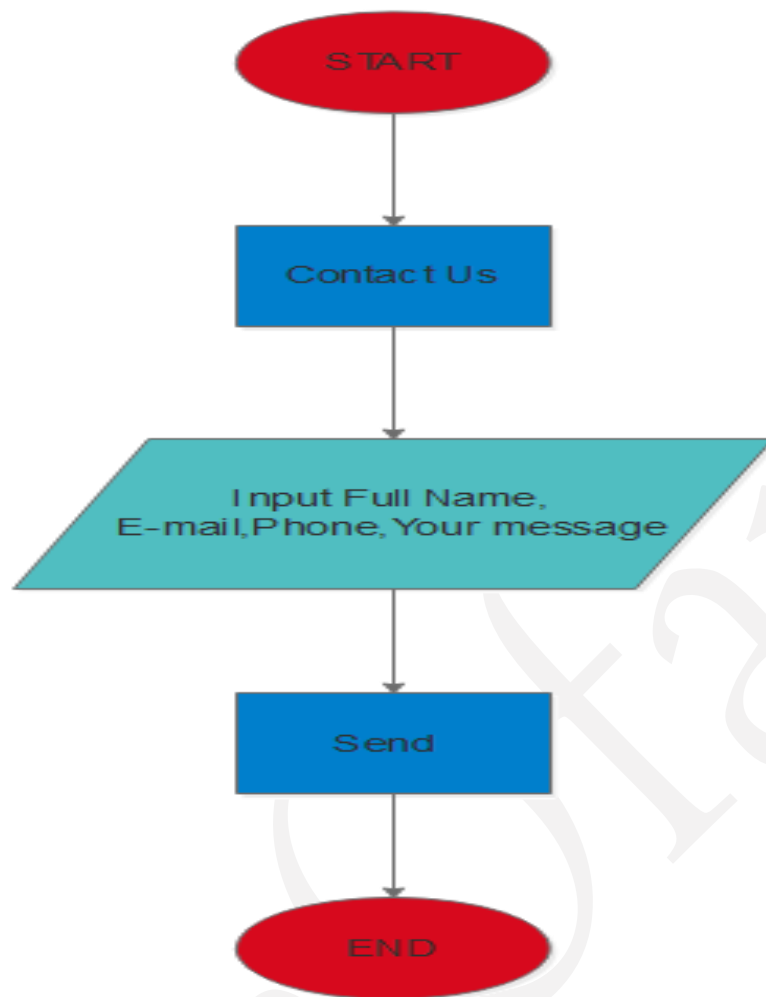

Figure 2 Contact Us Process Flow Chart

Data Flow Diagram (DFD)

Data Flow Diagrams show the flow of data from external entities into the system, and from one process to another within the system. There are four symbols for drawing a DFD:

- Rectangles representing external entities, which are sources or destinations of data.
- Ellipses representing processes, which take data as input, validate and process it and output it.
- Arrows representing the data flows, which can either, be electronic data or physical items.

Open-ended rectangles or a Disk symbol representing data stores, including electronic stores such as XML files and physical stores such as filing cabinets or stacks of paper.

Figures are the Data Flow Diagrams for the current system. The Context Level DFD provides a conceptual view of the process and its surrounding input, output and data stores.

AUTHENTICATED USER-PURCHASE CONTEXT DFD

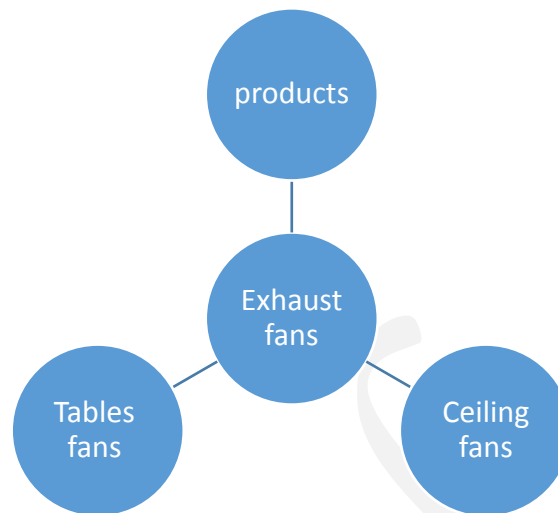

Figure 3 DFD Diagram

User Interface Design

Before implementing the actual design of the project, a few user interface designs were constructed to visualize the user interaction with the system as they browse for products, view store locator and purchase Table fan , Exhaust fans and Ceiling fans. The user interface design will closely follow our Functional Decomposition.

The Shopping Application

The objective of this application is to provide the user an online website where they can buy table fans, Exhaust fans and Ceiling fans from the comfort of their home. fanOfan website is used for this purpose. The user can select the desired product, place them in the cart and purchase them using a Credit Card.

Frist Fashion Website consists of the following web pages:

1. Home
2. Gallery
3. Services
4. New horizons
- 5.About
- 6.Contact

Figure 12 Home Page

Below figures, show some screenshots taken from running the application. All the functionalities are explained accordingly.

When the user types the web address in the browser, the Home page of the site is displayed, as shown in Figure.

Browse the products

When move to Gallery page, you will find various products. There is products category list that has different types such as table fans, Ceiling fans, Exhaust fans and Small fans.

Conclusion

The Internet has become a major resource in modern business, thus electronic shopping has gained significance not only from the entrepreneur's but also from the customer's point of view. Hence, we have designed this project for **fanOfan** to provide the user with easy navigation.

In this project, the user is provided with a website that used to buy Many kind of fans, Like Table fans, Exhaust fans and Ceiling fans online. In addition, every product provided with its complete details and its price. One more thing, there is a **DOCX and PDF** file to download and view it later.
